Let's Start!

Let's continue talking about collection information tools

Learning Outcome:

Gives information about instruments for data collection.

Apply methods for data collection, designing the necessary instruments for information processing, according to the situation set by the company.

Can Do Statements:

- I can talk about surveys and questionnaires, focus groups and case study.
- I can describe which are their advantages and disadvantages.

Ask your partner:

- Do you think that quantitative methods that collect numbers provide more useful information? Why? Why not?
- What evaluation data collection involves social science research method?

Let's Explore!

Dana and Gregory have to do some market research.

Instructions: Read the text below.

Gregory: Hello, Dana.

Dana: Hello, Gregory. Are we working on the research of the market today?

Gregory: Yes, we are. To start, we are collecting and selecting all the data throughout different collection information tools. For instance, we are using rigorous statistical techniques and mathematical strictness to understand the phenomena of what is really happening in the market.

Dana: Are we using any specific method to collect data?

Gregory: Well, we are collecting information on surveys, questionnaires, focus groups and case studies.

Dana: What is the difference among all these methods?

Gregory: Firstly, the surveys and questionnaires are written questions that people usually answer in a piece of paper or by e-mail. With this method, you can collect general information. Secondly, you can use the focus groups to interview a group of people to know what they think about a product. Finally, the case studies permit people to analyze deeply the context and the detailed information of a situation. In general, the quantitative and qualitative research studies assess and estimate the attitudes and behavior of people through a variety of sampling strategies.

Dana: What are the advantages and disadvantages of these information collection methods?

Gregory: As I said before, the surveys and questionnaires cover a large number of people and a wide geographic area. Besides, conducting surveys are inexpensive and easy. However, the respondents may leave incomplete answers; questions may not have the same meaning to all respondents, and size and diversity of sample will be limited by people's ability to read.

Dana: I know the focus group can provide useful information on a topic, but it can be susceptible to facilitator bias, and the discussion can be dominated for one or few participants.

Gregory: Also, the case study can represent people's experience when we teach a new product to new buyers, but it takes a lot of time to collect, organize, and analyze information which in terms of money can be expensive.

**Let's Practice!**

The information collection tools have different characteristics.

Instructions: Match column A with column B.

COLUMN A

1. Focus groups
2. Case of studies
3. Surveys
4. Questionnaires

COLUMN B

- a. Lists of questions that people usually answer in a piece of paper or by e-mail.
- b. Tabulation of is easier. People feel more appealing responding them.
- c. It presents a deeper view of the object of study.
- d. This method is useful to acquire an insight from different people towards a topic.

**Let's Practice!**

What method do you use?

Instructions: Select the correct answer to complete the sentence.

1. Are we _____ on the research of the market today?
 - a. working
 - b. worked
 - c. works
2. What are you _____ to analyze the information of the surveys?
 - a. doing
 - b. does
 - c. did
3. Are we _____ rigorous statistical techniques and mathematical strictness to understand the phenomena?
 - a. used
 - b. uses
 - c. using
4. Is she _____ a qualitative assessment to understand people's behavior?
 - a. designing
 - b. designed
 - c. designs
5. Are we _____ all the information by with the surveys and questioners?
 - a. collecting
 - b. collect
 - c. starts

**Extension Activity**

What is a case study?

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for more information about a case study.
- Read the main information, take notes.
- Write a short presentation illustrating the elements of the case study with examples.
- Share with your instructor.

Self-Assessment**Yes****No**

- I look for information about a case study in a public library.
- I write about the elements of the case study with examples.
- I talk about case study elements with my instructor and my classmates.

☐ ☐☐ ☐☐ ☐**Target Words**

- **rigorous** (adjective): referring to severe
e.g. We are using rigorous statistical techniques.
- **strictness** (noun): a demanding situation
e.g. We are using rigorous statistical techniques and mathematical strictness to understand the phenomena of what is really happening in the market.
- **quantitative** (adjective): determined by the quantity
e.g. In general, the quantitative and qualitative research studies assess and estimate the attitudes and behavior of people through a variety of sampling strategies.
- **wide** (adjective): referring to expansive or broad
e.g. As I said before, the surveys and questionnaires cover a large number of people and a wide geographic area.
- **bias** (noun): a personal view or tendency that affects judgment
e.g. I know the focus group can provide useful information on a topic, but it can be susceptible to facilitator bias.

Learning Points

Present Continuous: Current Actions Interrogative Form

You use **present continuous interrogative** when you want to make questions about current actions happening at the moment you are speaking or when the actions are temporary.

You can use the following structure to create yes/no questions in **present continuous**:

BE (**Are/Is/Am**) + subject + verb in gerund (**-ing**) + complement + ?

Examples:

Am I working with this focus group?

Are you using those questionnaires?

Is he doing the research?

Remember that you use yes/ no questions to ask for short answers, while you use WH question to ask for open answers or more information.

*Look at the following structure create Wh-questions in **present continuous**:*

WH words (**Why, What, Where, When**) + be (**are/is/am**) + subject + verb in gerund (**-ing**) + complement + ?

Examples:

Why is she **typing** all those letters?

When are we **having** our next meeting?

How are they **doing** the survey?

Examples

- Are we working on the research market?
- Which collection information tools are giving the company more meaningful data?

Learning Points

Advantages and Disadvantages of Information Collection Tools

The quantitative and qualitative collection information tools are different methodologies used to collect data. These methods produce numbers or detailed information in order to fulfill the focus of the research purpose.

Information Collection Tools	Advantages	Disadvantages
Surveys	In general, people are familiar with surveys. Conducting surveys is inexpensive and easy, especially for the wide geographic area. (Survey, questionnaires, photograph, videotape, slides, database, etc.)	Survey respondents may leave incomplete answers. Questions may not have the same meaning to all respondents. Size and diversity of samples will be limited by people's ability to read.
Questionnaires	People feel more appealing responding to a questionnaire than taking part in an interview. Tabulation is also easier.	It's difficult to get additional details. Good questions are hard to write and they take significant time to develop.
Focus groups	Group dynamics can provide useful information. It is useful to acquire insight into a topic.	Susceptible to facilitator bias. Discussion can be dominated for one or a few participants. Data analysis is time-consuming. At the individual level, it is not possible to gather information.

Learning Points

Case of studies	They fully represent people's experience. A powerful way of educating a situation, experience or program to outsiders. The case study presents a deeper view of the object of study.	It takes a lot of time to collect, organize and analyze information. It can be really expensive.
------------------------	--	--

Examples

- *The advantages of surveys and questionnaires are that they are designed to cover a large number of people and a wide geographic area. Besides, conducting surveys are inexpensive and easy.*
- *I know the focus group has a dynamic that can provide useful information and it is useful in acquiring a better understanding into a topic.*
