Let's Start!

Let's talk about collecting data

Learning Outcome:

Gives information about instruments for data collection.

Apply methods for data collection, designing the necessary instruments for information processing, according to the situation set by the company.

Ask your partner:

- Should we always collect data from as many participants as possible? Why? Why not?
- What is the best way to collect data?

Can Do Statements:

- I can talk about collection information tools.
- I can describe observation, interviews, and document reviews as collection information tools.
- I can explain in a simple way the advantages and disadvantages of using observation, interviews and document reviews.

Let's Explore!

Helen talks to his thesis adviser for advice!

Instructions: Read the text below.

- Mr. Pratt:** Hello, Helen. Did you bring your thesis report to analyze the method you are using?
- Helen:** Hello, Mr. Pratt. Yes. I did, but the method is not working.
- Mr. Pratt:** Well, you know that there are different collection information tools that you can use to compile data. Are you gathering for numbers?
- Helen:** I'm not looking for data or numbers in my thesis. Actually, the purpose of it is to gather information in a deep and rich way about what people think.
- Mr. Pratt:** Indeed! Your research has to use qualitative methods.
- Helen:** What do you recommend me?
- Mr. Pratt:** I recommend you consider your primary sources, so you can choose what method can be better for your study. For instance, you can do some research on the interview qualitative method. This one is useful to gain an insight and a context of a topic. Also, you can find out about the document reviews. These collect data from written sources. As well, the observation method that collects data where and when an event or activity is occurring. However, I believe that observations aren't gaining popularity among researchers because they can be subjective.
- Helen:** Which are the advantages and disadvantages of using interviews, document reviews, and observation?
- Mr. Pratt:** The interview permits respondents to refer to what is important to them, but it is time-consuming and costly compared to the other tools. Then, the document reviews that are inexpensive, and you can get good sources of background information; however, the information may be irrelevant, confused, unavailable or out of date. Finally, the observation that directly seeks what people do rather than relying on what they say they do. Nevertheless, it is susceptible to the observer and the participant's bias because people usually perform naturally when someone else is not observing them. In other words, they tend to behave better in this kind of method.
- Helen:** I get it. Thank you, Mr. Pratt.
- Mr. Pratt:** Your welcome and good luck.

**Let's Practice!****Collection Information Tools**

Instructions: Read the text. Write the missing word in the blank. Use: these, those, this.

I went to the teacher's lounge because I needed to speak with Mr. Pratt about my thesis. He told me that I must search for information about collection information tools; _____

sounds familiar to me. Maybe I heard those topics when I was at university. Then, I remembered that _____ were the different methods used for collecting data, such as observation, interviews or documents review. After that, the teacher told me that some of _____ methods are proper tools to continue with my thesis.

**Let's Practice!****Useful Qualitative Methods**

Instructions: Complete the sentences by writing its corresponding word. Use capital letter where necessary. Use: observation, document reviews, interview.

1. We are not using an _____ because it is time-consuming and costly.
2. We are not employing the _____ because the information is out of date.
3. We are not making _____ because people usually perform better when someone observes them.

Extension Activity

What is the best tool for you?

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for information about collection information tools.
- Take notes about 4 collect information tools.
- Make a chart to explain the advantages and disadvantages that each tool has.
- Use present continuous (negative form) and demonstratives pronouns (as pronouns, adjectives) in your sentences.
- Share your chart with your partners.

Self-Assessment

Yes

No

- I look for information about collection information tools.
- I make a char to explain the advantages and disadvantages that each tool has.
- I use present continuous negative form and demonstratives pronouns as pronouns, adjectives.
- I share with my partners.

☐ ☐
☐ ☐
☐ ☐
☐ ☐

Target Words

- interview** (noun) a short conversation where people make questions in order to look for information
e.g. I recommend you start making a research on the interview qualitative method.
- insight** (noun) an act of perceiving the truth
e.g. These tools are useful for gaining insight and context into a topic.
- subjective** (adjective) based on feelings or personal beliefs
e.g. I believe that observations aren't gaining popularity among researchers because they can be subjective.
- report** (noun) a written document that accounts for detailed information
e.g. Did you bring your report today?
- thesis** (noun) an academic document or report that reflects the conclusion of a personal research on a topic
e.g. My thesis isn't looking for data or numbers.
- indeed** (adverb) in fact
e.g. Indeed! Your research has to use qualitative methods.

Learning Points

Present Continuous: Current Actions Negative Form

Present Continuous in negative form refers to current actions that are not happening when you're speaking.

When you use **present continuous** in negative form, you want to say that you are not doing something at that precise moment.

Look at the following structure:

Subject + to be in negative form (**am not / is not / are not**) + **gerund (-ing)** + complement

Examples:

I **am not using** the correct method.

He **is not observing** that group.

We **are not collecting** data.

Examples

- *My thesis isn't looking for data or numbers.*
- *I believe that observations aren't gaining popularity among researchers because they can be subjective.*

Learning Points

Information Collection Tools: Observation, Document reviews, Interviews

Collection information tools are the different methods used for collecting data and involves two important features, the source, and the methods.

Source: It is the place where you will get the information; for example, records, reports, journals, people (participants, parents, volunteers, teachers), pictorial records, and observations (video or photos, observations of events, artwork), among others.

Methods: This is the way in which you will collect or gather the information. It is often thought of as quantitative or qualitative. To start, quantitative data collection methods produce numbers and are more structured. Plus, these allow for aggregation and generalization. On the other hand, qualitative data collection methods are more open and provide for depth and richness.

The most common qualitative methods are:

1. Observation: Compile data where and when an event or activity is occurring.
2. Document review and analysis: Collect data from written sources.
3. Interview: Useful for gaining insight and context into a topic.

Examples

- *I recommend you start making a research on the interview qualitative method.*
- *Next, investigate about the document reviews. These methods collect data from written sources.*
