Let's Start!

Let's create a swim lane flowchart!

Learning Outcome:

Understands systems theories, business processes and basic concepts on IT.
Create a map of processes that allows identifying areas in an information system, using IT tools to generate reports based on the company's needs.

Can Do Statements:

- I can talk about actors and actions involved in the business process.
- I can briefly explain how actors and actions are represented in the diagramming of a business process.

Ask your partner:

- How does the business process affect organizations?
- In an organization, which process is more important, the production or the finance one?

Let's Explore!

People and Steps Involved in the Business Process

Instructions: Read the text below.

Professor: In this class, we are going to cover actors and actions involved in the business process. First, you have to remember that all businesses have processes. There are people and steps involved in them, and there is also a system that we use to get things done. For example, there are production, billing, and human resources processes, among others.

Megan: What about the actors and actions?

Professor: Well, a business process is a sequence of activities. First, you collect data about different actors who are in charge of the departments in the company. Then, in each department, we have to structure the actions that produce a service or a product.

Megan: How do we sequence the actors and actions?

Professor: You create a business process. Think about a procedure that involves ordering, producing, and selling a product with a swim lane flowchart. Ok, let's start with the diagram! Please, draw it at the top of your pages. Place the actors above the lines, and under each of them, write down their actions. The actions are going to be the steps of the business process. Write each name in a rectangle.

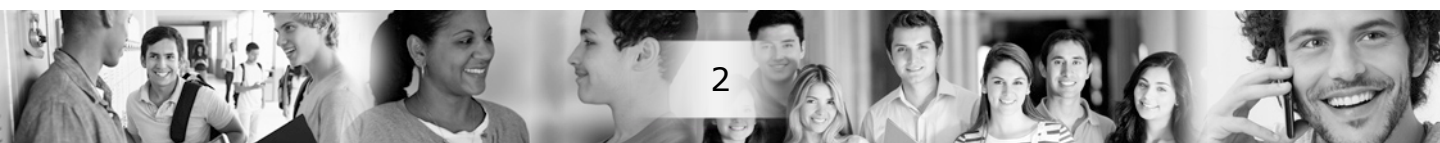

Megan: Ok, I am going to start with the ordering department. First, a client takes an order. Then, we have the production department where the material is ordered; and then, we schedule the production to manufacture the product.

Professor: What else?

Megan: Well, below the sales department we write "ship the product." The last part is under the accounting department, which has to bill the customer.

Professor: Excellent. Now, you need to create the connections in order to add structure to this process. Please, establish the connections between actions and actors using arrows. Use diamonds instead to show decision points.

Megan: Ok, I place the arrows under the rectangles, and with this, we have a swim lane flowchart.

Let's Practice!

How to make a swim lane flowchart

Instructions: Find the words for each sentence in the wordsearch below.

1. The "ship the product" legend goes b _ _ _ _ the sales department.
2. The arrows b _ _ _ _ _ actions and actors show their relations.
3. The actors' names go a _ _ _ _ their functions.
4. The "bill the customer" legend goes u _ _ _ _ the accounting department.
5. B _ _ _ _ _ the ordering department goes the production department.

Let's Practice!

A good location makes a good diagram.

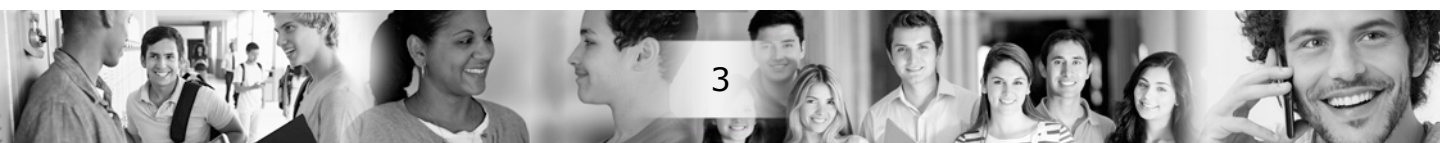

Instructions: Match column A with column B.

COLUMN A

1. Steps
2. Involve
3. Purchasing
4. Selling
5. Billing
6. Process

COLUMN B

1. When actors and actions are included in the business process.
2. You have to follow these series or stages in the process system.
3. It is a set of steps in a business.
4. You receive it when you buy something.
5. When companies get profit from something they give to a person or group.
6. When you get a good or a service by giving money.

Extension Activity

Create a swim lane flowchart.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Think about a business process. Search information about its typical steps.
- Design a flowchart to explain the necessary steps to complete the process.
- Present the flowchart to your class.

Self-Assessment

Yes

No

- I search for information about a business process.
- I explain a business process through a flowchart.
- I present my work to the class.

☐ ☐
☐ ☐
☐ ☐

Target Words

- involve** (verb): to include something or somebody to be part of a process, situation or circumstance
e.g. Think about a procedure that involves ordering, producing, and selling a product with a swim lane flowchart.
- remember** (verb): to have in mind or recall something
e.g. First, you have to remember that all businesses have processes.
- step** (noun): a series of levels or stages that someone follows to do something
e.g. There are people and steps involved in them, and there is also a system that we use to get things done.
- billing** (noun): a document that is the proof of a purchase or order
e.g. For example, there are production, billing, and human resources processes, among others.
- sell** (verb): to negotiate with goods or services for a price that was agreed
e.g. Think about a procedure that involves ordering, producing, and selling a product with a swim lane flowchart.
- rectangle** (noun): a geometric figure that has four lines, two parallel sides, one larger than the other.
e.g. Put each one in a rectangle.

Learning Points

Prepositions of Place

Prepositions of place are words that you use to express the position of a thing, person, animal or abstraction.

The use of these prepositions evidence the relation in space between people, place and things.

The prepositions of place normally answer the questions **where?**, and they go before a noun.

Let's have a look at the following prepositions:

Above

You use **above** when you want to talk about an object that is in a higher position than your point of reference.

Example:

*The business books you are looking for are **above** those documents. (The point of reference is a pile of documents, and the business books are in a higher position.)*

Under

You use **under** when you want to talk about an object that is places in a lower position than your point of reference. Usually, the point of reference covers the object.

Example:

*The business books she is looking for are **under** my bed. (The point of reference is the bed, which covers the books.)*

Across

You use **across** when you refer to something that is placed or moves from one side to the other side of your point of reference. Usually, this point of reference is a piece of land, a river or a road. It can also refer to an object that is on the opposite side of your point of reference.

Example:

*I walk **across** the river to get home. (The river is my point of reference. I walk from one side of the river to the other side of it.)*

*The library where I buy the business books is **across** the road. (The road is my point of reference and the library is on the opposite side of it)*

Other prepositions of place are :

- In front of
- Behind
- Above
- Under
- Below
- Next to

Examples

- *Place the actors above the lines, and under each of them, write down their actions.*

Learning Points

Imperatives

Imperatives are verbs that we use to give commands, instructions, and make suggestions or invitations.

You form **the imperative** by using **the infinitive** of the verb without **to**.

Example:

Write *that report now!*

Come *here and read this for me!*

Bring *that book.*

Follow this structure to form imperative sentences. Notice that in these type of sentences there is no subject (you, she, he etc.).

Affirmative Imperative: **Send** *me the report before 9 am.*

Negative Imperative: **Don't stay** *up late.*

Look at some of the contexts you can use infinitives:

- Direct order: **Go** *there.*
- Give instructions: **Listen** *to the audio.*
- Invitation: **Come** *in and sit* down.
- Make suggestion: **Don't go**, *it will rain.*

Examples

- *Draw the diagram at the top of your pages.*
- *Place the actors above the lines, and under each of them, write down their actions.*
