### Let's Start!

#### Talking About Computers

#### Types of Software

#### Learning Outcome:

Understands systems theories, business processes and basic concepts on IT.  
Create a map of processes that allows identifying areas in an information system, using IT tools to generate reports based on the company's needs.

#### Can Do Statements:

- I can list the different types of software according to their function, type or field of use.
- I can give brief information about the different types of software according to their function, type or field of use.

#### Ask your partner:

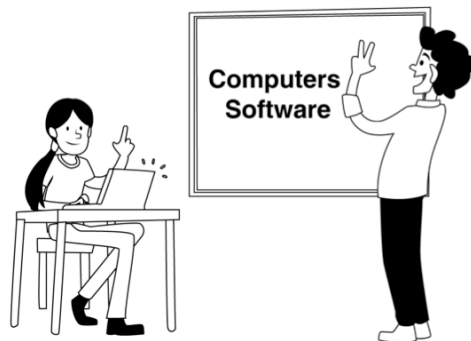

- Do you use your personal computer for work or for entertainment?
- What kind of computer programs do you have in your personal computer?

## Let's Explore!

What is computer software?

*Instructions: Read the text below.*

- Daniel:** In this presentation, we are going to talk about computer software and types of software.
- Martha:** In simple words, what does computer software mean?
- Daniel:** In order to understand what computer software is, let me ask you a question: Do we speak the same language as computers?
- Martha:** Hmm. I guess we don't. Why do you ask me that?
- Daniel:** Because computers work with binary code, and they only understand low-level language. With this in mind, we need to remember that if we want a computer to do something, we need to translate the command we give so a computer can understand it. In other words, the computer needs to understand what we say.
- Martha:** So, the translator is the software, isn't it?
- That's right. Software makes the computer suitable for us. There are many categories of software depending on the uses, functions, and types. We can group the types of software into three broad categories: domain of use, domain of execution, and programming tools.
- Martha:** What does domain of use mean?
- Daniel:** It's a category based on the purpose of the software. This type of software enables users to complete a task. You can personalize your computer by adding or removing applications or programs that are created for a purpose. For example, if you need to do a report, you install a program such as a word processor that allows you to write it.
- Martha:** I see. So, what does domain of execution software do?
- Daniel:** Well, in this category, we can find desktop applications such as office suites, web applications, plugins, web browsers, firmware, etc. This type of software allows other programs to run.
- Martha:** OK. One last question: What does programming tools refer to?
- Daniel:** Programming tools are also applications or programs, but they are different because software developers use them to produce, repair, maintain, or support other programs and applications. They can be debuggers, compilers, linkers, etc.

**Let's Practice!**

The main concepts about kinds of software

*Instructions: Use the words from the box to correctly complete the sentences.*

**Word Bank**

You use to fix / software do / does the domain / do you use / do the

1. What \_\_\_\_\_ of use software do?
2. What does the domain of execution \_\_\_\_\_?
3. What \_\_\_\_\_ programming tools do?
4. What kind of software \_\_\_\_\_ to create or edit images?
5. What kind of software do \_\_\_\_\_ a problem?

**Let's Practice!**

Ask questions about software.

*Instructions: Select the correct option to complete the sentences.*

1. Do we \_\_\_\_\_ the same language as computers?  
a. speak  
b. spoke  
c. speaks
2. What does domain of use \_\_\_\_\_?  
a. mean  
b. means  
c. meant
3. What software do we \_\_\_\_\_ to create or solve viruses?  
a. uses  
b. used  
c. use
4. What do the programing tools \_\_\_\_\_?  
a. did  
b. do  
c. does
5. Does the domain of execution \_\_\_\_\_ a computer?  
a. customize  
b. customized  
c. customizes
6. What \_\_\_\_\_ computer software mean in few words?  
a. does  
b. do  
c. done
7. Do we \_\_\_\_\_ to translate the command we give to the computer?  
a. needed  
b. needs  
c. need
8. Does the software \_\_\_\_\_ different uses and functions?  
a. has  
b. had  
c. have
9. What \_\_\_\_\_ we use the different computer programs for?  
a. do  
b. done  
c. is

## Extension Activity

### Analyzing Software Programs

*Instructions: Complete the following steps. Fill in the Self-Assessment.*

- Check a computer with the typical programs and functions and analyze them.
- Make a list of the programs you can recognize on it.
- Classify the programs into the 3 kinds of software.
- Present your list to the class.

#### Self-Assessment

Yes

No

- I analyze the programs in a computer.
- I list the programs in a typical computer.
- I classify the software programs according to the type.
- I present and explain my work to the class.

☐ ☐
☐ ☐
☐ ☐
☐ ☐

## Target Words

- **With this in mind** (phrase): taking this into account  
e.g. With this in mind, we need to remember that if we want a computer to do something, we need to translate the command we give so a computer can understand it.
- **translate** (verb): to convert one language into another  
e.g. We need to translate the command we give so a computer can understand it.
- **command** (noun): an instruction or order  
e.g. We need to translate the command we give so a computer can understand it.
- **add** (verb): to put in something in order to make it grow  
e.g. You can personalize your computer by adding or removing applications or programs that are created for a purpose.
- **remove** (verb): to take away or eliminate something  
e.g. You can personalize your computer by adding or removing applications or programs that are created for a purpose.

## Learning Points

### Simple Present Tense - Interrogative Form

The **simple present** tense is used to talk about ideas or situations that are routines or habits. Also, it can be used to talk about ideas that are true now. These ideas are generalizations about people or things, or it can be beliefs as well.

In order to make **questions** in using the **simple present**, you have to use the auxiliary verbs **do** or **does**. You can use short answers.

Structure of **yes/no questions**:

**Do/Does** + subject + **verb**?

Example:

**Do** you **use** programming tools at work?

When you want to make **information** or **wh- questions** in **simple present**, you need to use **what, where, when, who, which, whose** or **how** before the auxiliary verbs **do** or **does**.

Structure of **wh- questions**:

**Wh- question word** + **Do/Does** + Subject + **verb**?

Example:

**What does** JAVA **stand for**?

### Examples

- *In simple words, what does computer software mean?*
- *Do we speak the same language as computers?*

## Learning Points

---

### What Is a Software

A software or computer software includes programs and applications that a computer uses in order to process information or perform a task. It is made of encoded information.

The basic types of software are:

1. Application software. They are called domain of use. They are the productivity programs because they enable the user to complete a task. For example, a word processor.
2. System software. They are called domain of execution. These programs manage the computer. For example, an operating system like Windows or Linux.
3. Programming tools. These programs support and manage the computer. They also diagnose and fix problems.
